

Exploratory Data analysis project

Load the dataset into pandas DataFrame and Perform following Analysis

You are expected to write a report on the dataset which should include:

1. Meta Data Analysis

1. *Shape of dataset*
2. *Datatypes of all columns*
3. *head and tail of data*

2. Statistical analysis

1. *Q1,Q2,Q3 and statistical analysis of dataset.*
2. *Systematic information of data*

3. Data transformation

1. *Handle All null values (use `dropna()`)*
2. *Handle all duplicate values*
3. *Create extra features and perform label encoding if required*
4. *remove unwanted columns*

4. Handle outliers

- 1. Use Boxplot to identify outliers and write report on*
- 2. Remove all boxplots using IQR and re-plot to gain more insights.*

5. Pairplot and uni/Bi variate analysis

- 1. Create Histogram and pie-chart of data columns.*
- 2. Create Scatter and bar plots of required columns if applicable*
- 3. Create pairplot of all numeric columns and infer about the dataset*
